TL note regarding the post of second in command
The term *XO*, or exe*cutive* o*fficer*, was apparently only used by the US navy back in WWII. The royal navy and imperial Japanese navy (which was designed after the royal navy), would've used the term *commander* for this post, or *first officer* on smaller ships.

...or so I think. Glorious Helvetia is landlocked, so I'm not good with seamen...
